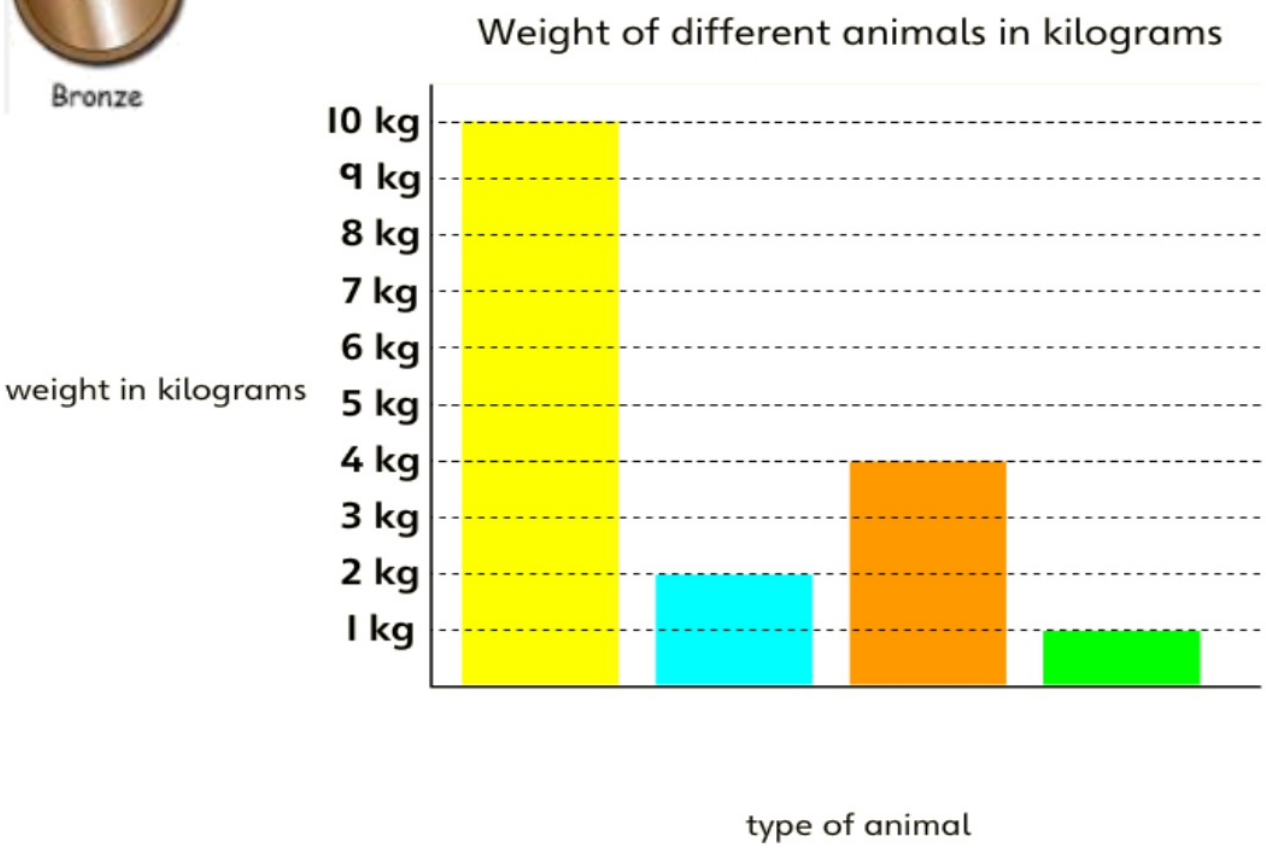
Can I draw a bar chart and retrieve data?



Write down the weight of each animal in kgs

Copy the graph carefully and accurately on to a piece of paper.
Ensure you have labelled the axis correctly. Then find out the weights of the animals.

To be successful I need to:

- Title
- X and Y axis drawn with a ruler
- Clear scale - numbers on the line
- Bars same width
- Gap between the bars
- X and Y labelled
- Bars coloured - neatly
- Bars same width
- Bars correct height
