

Name: \_\_\_\_\_ Date: \_\_\_\_\_

First, label the diagram to show how a greenhouse becomes and stays warm.  
Next, use the word bank to complete the sentences below that explain how greenhouses help plants to grow.

ventilate high glass trap warm  
heat transparent overheat plastic sunlight

Greenhouses are mostly made from \_\_\_\_\_ materials (usually \_\_\_\_\_ or clear \_\_\_\_\_). This means that \_\_\_\_\_ can shine through and \_\_\_\_\_ both the air and plants inside. The glass or plastic helps to \_\_\_\_\_ the \_\_\_\_\_ inside the greenhouse, so that it stays \_\_\_\_\_ and continues to get warmer throughout the day. If the temperature in a greenhouse becomes too \_\_\_\_\_, the plants may \_\_\_\_\_ and die, so it is important to be able to \_\_\_\_\_ the greenhouse when needed.
